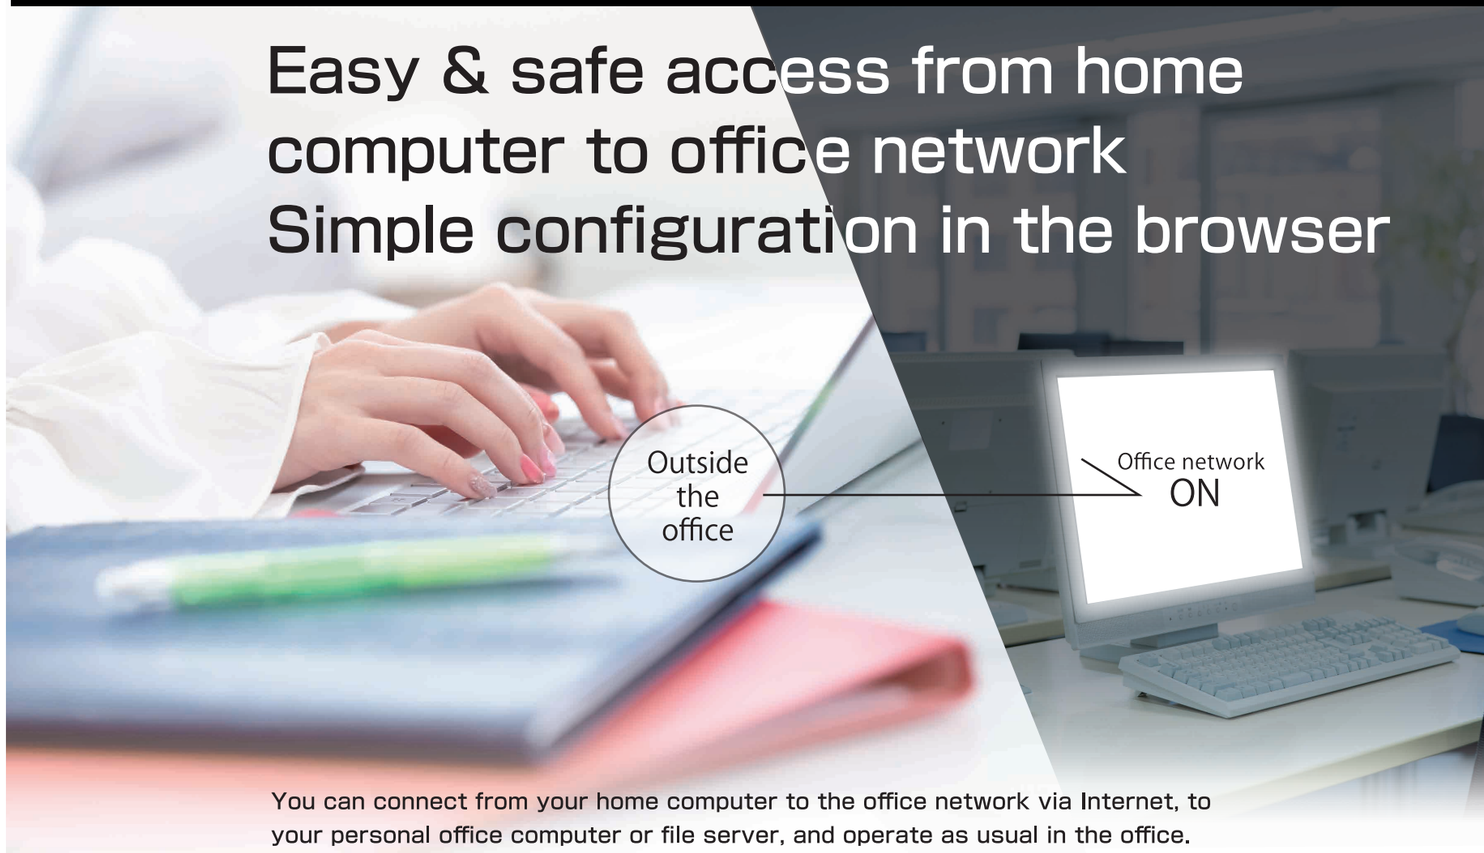
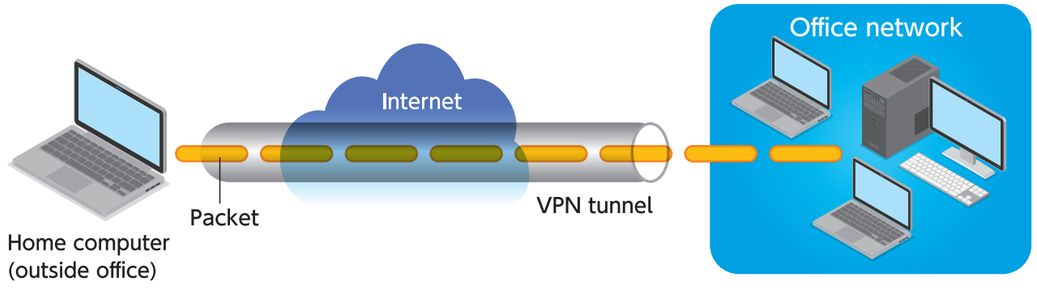
Remote Access VPN

Manage Cube PC Remote



You can connect from your home computer to the office network via Internet, to your personal office computer or file server, and operate as usual in the office. **VPN is used for the connection from home computer to the office network.** Remote Access VPN creates a tunnel through the office network and **transfer encrypted data using packet as the data unit,** enabling safe and comfortable use without any concern on the raw data flowing out on the network.



Actworks Co., Ltd.

REMOTE ACCESS VPN

Connect to personal office computer & file server from outside

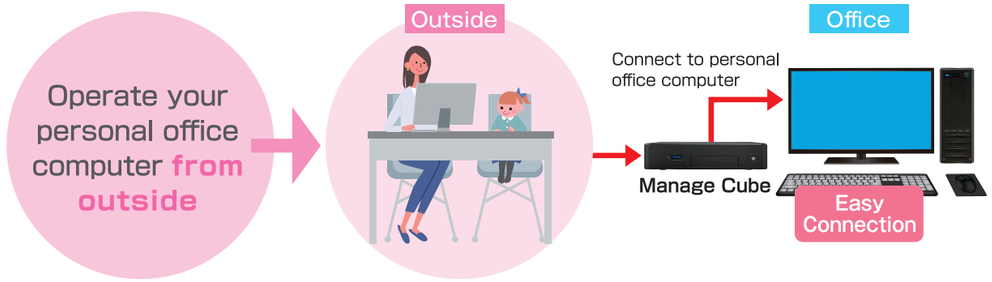
Easy access from outside the office

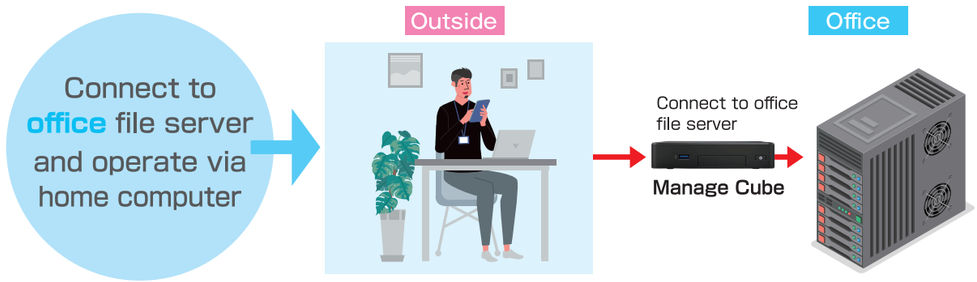
Enhanced security with encryption

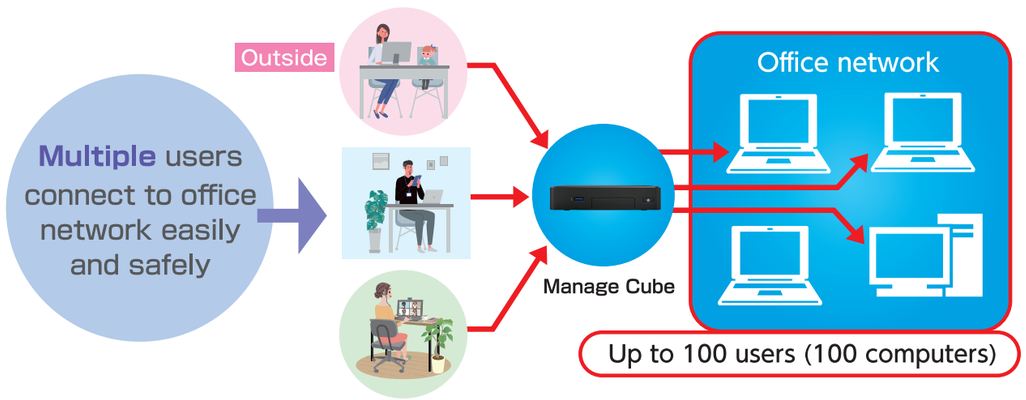
Features

Connect

Having troubles when connecting to office computers remotely (from outside the office)? It can eliminate frustration and help for easy connection. Manage Cube PC Remote can connect up to 100 users (devices).



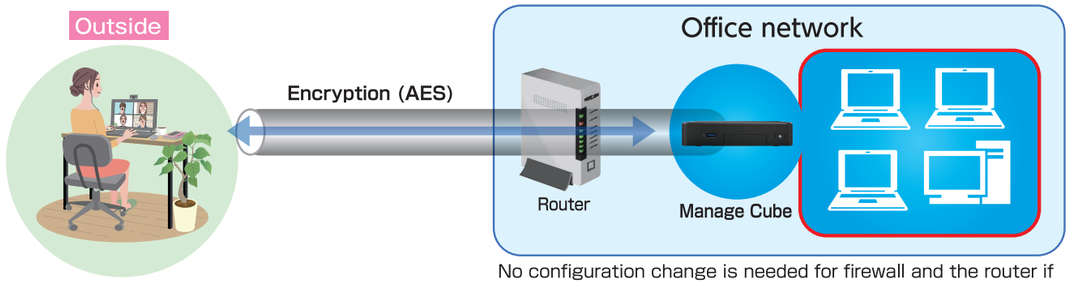




Encryption

One of the advantages of Remote Access VPN is the security enhancement by "encryption". IP networks including Internet, to which anyone can access, are always exposed to risks such as eavesdropping and spoofing. The VPN protocol ensures safe VPN sessions with the connection source by encrypting all communications and data relating to user authentification with SSL.

Strong encryption of VPN sessions by encryption algorithm



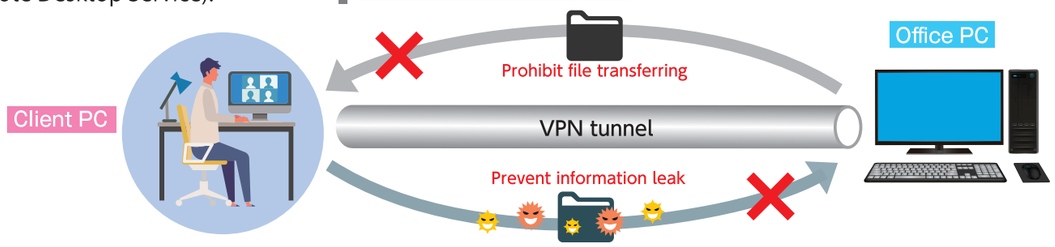
No configuration change is needed for firewall and the router if using VPN Azure.

Secure VPN Function

The function is limited to Secure VPN (Remote Desktop Service).

Secure VPN prevents any data in office computers from copying (transferring) into other client computers. Transferring from client computers into office computers are also prohibited.

Prevention of information leak



Easy introduction & Simple operation

Manage Cube PC Remote comes with…

- easy browser-based configuration
- ready-to-use user ID & password
- easy change of user's password
- easy change of Manage Cube host name & IP address

*Manage Cube uses SoftEther VPN.
